

Abstract Of The Disclosure

1 A slot machine allows the operation of two or more
2 independent slot games at the same time. The two or more
3 slot games may have the exact same game format or different
4 game formats. Each slot game pays independently of the
5 other slot game, but uses a common pool of credits. One
6 player may play cooperatively with another player, or other
7 players, at the same gaming machine; or one player may play
8 two or more slot games at the same time on the same
9 machine. By placing multiple slot games on the same
10 machine, the amount of money deposited into the slot
11 machine increases without taking up any additional casino
12 floor space. Therefore, casinos, especially those with
13 restricted floor space or limited quantities of slot
14 machines, may generate higher profits per square foot and
15 offer more games to their clientele.
